

Advanced Automotive Electricity & Electronics

Chapter 27 Regenerative Brakes

Opening Your Class

KEY ELEMENT	EXAMPLES
Introduce Content	This course or class covers operation and service of Advanced Automotive Electricity & Electronics . It correlates material to task lists specified by ASE and NATEF.
Motivate Learners	Explain how the knowledge of how something works translates into the ability to use that knowledge to figure why the engine does not work correctly and how this saves diagnosis time, which translates into more money.
State the learning objectives for the chapter or course you are about to cover and explain this is what they should be able to do as a result of attending this session or class.	Explain the chapter learning objectives to the students. <ol style="list-style-type: none">1. Explain the principles involved in regenerative braking.2. State the types of regenerative braking systems.3. Discuss the parts and components involved in regenerating braking.4. Explain how the regeneration system works.
Establish the Mood or Climate	Provide a <i>WELCOME</i> , Avoid put downs and bad jokes.
Complete Essentials	Restrooms, breaks, registration, tests, etc.
Clarify and Establish Knowledge Base	Do a round robin of the class by going around the room and having each student give their backgrounds, years of experience, family, hobbies, career goals, or anything they want to share.

ICONS

Ch27 Regenerative Brakes

1. SLIDE 1 CH27 REGENERATIVE BRAKES

Check for **ADDITIONAL VIDEOS & ANIMATIONS**

WEB SITE IS CONSTANTLY UPDATED

2. SLIDE 2 **EXPLAIN** FREQUENTLY ASKED QUESTION

3. SLIDE 3 **EXPLAIN** Principles of Regenerative Braking:

DEMONSTRATION SHOW STUDENTS COMPONENTS OF HEV REGENERATIVE BRAKES SYSTEM.

4. SLIDE 4 **EXPLAIN** FIGURE 27–1 Honda Insight hybrid constructed mostly of aluminum to save weight.

5. SLIDE 5 **EXPLAIN** FIGURE 27–2 A Toyota Prius hybrid electric vehicle weighs more and therefore has greater kinetic energy than a smaller, lighter vehicle.

6. SLIDE 6 **EXPLAIN** Types of Regenerative Braking Systems

7. SLIDE 7 **EXPLAIN** FIGURE 27–3 The electronic brake control unit (EBU) is shown on left (passenger side) and the brake hydraulic unit is shown on the right (driver's side) on this Ford Escape system.

8. SLIDE 8 **EXPLAIN** FREQUENTLY ASKED QUESTION

9. SLIDE 9 **EXPLAIN** FIGURE 27–4 A typical brake curve showing the speed on the left and the percentage of regenerative braking along the bottom. Notice that base brakes are being used more when vehicle speed is low.

10. SLIDE 10 **EXPLAIN** Types of Regenerative Braking Systems

11. SLIDE 11 **EXPLAIN** FREQUENTLY ASKED QUESTION

ICONS	Ch27 Regenerative Brakes
	<p>12. SLIDE 12 EXPLAIN FIGURE 27–5 frequency (“f”) applied to windings of AC synchronous motor can be varied to create either forward torque (“T”) or regenerative braking. If frequency is changed from point 1 to point 2 as shown on chart, torque is changed from motoring (powering the vehicle) to generating and this change can be made almost instantly by the controller</p>
	<p>13. SLIDE 13 EXPLAIN FREQUENTLY ASKED QUESTION</p>
	<p>14. SLIDE 14 EXPLAIN Battery Charging During Regeneration</p>
	<p>15. SLIDE 15 EXPLAIN FREQUENTLY ASKED QUESTION</p>
	<p>DISCUSSION: DISCUSS NEED FOR SAFETY PRECAUTIONS WHEN WORKING AROUND & WITH HYBRID ELECTRIC VEHICLES. BOTH HYBRID ELECTRIC VEHICLES & ALL-ELECTRIC VEHICLES USE HIGH-VOLTAGE CIRCUITS THAT CANNOT BE TOUCHED WITHOUT PROTECTION.</p>
	<p>16. SLIDES 16 EXPLAIN Regenerative Brake Components</p>
	<p>17. SLIDE 17 EXPLAIN TECH TIP</p>
	<p>18. SLIDE 18 EXPLAIN FIGURE 27–6 The Toyota Prius regenerative braking system component showing the master cylinder and pressure switches.</p>
	<p>19. SLIDE 19 EXPLAIN FIGURE 27–7 The Ford Escape regenerative braking system, showing all of the components. Notice the brake pedal position sensor is an input to the ECU, which controls both the brake and traction control systems.</p>
	<p>20. SLIDE 20 EXPLAIN FIGURE 27–8 “B” position on the shift display on this Lexus RX 400h means braking. This shifter position can be selected when descending long hills or grades. The regenerative braking system will be used to help keep the vehicle from increasing in speed down the hill without the use of the base brakes</p>
	<p>21. SLIDE 21 EXPLAIN How the Regeneration System</p>

ICONS**Ch27 Regenerative Brakes**

Works

22. **SLIDE 22 EXPLAIN NOTE**
23. **SLIDE 23 EXPLAIN** How the Regeneration System Works
24. **SLIDE 24 EXPLAIN FIGURE 27–9** ABS ECU on a Toyota Prius uses brake switch and pressure sensor inputs to control the regenerative braking system. Circuit includes a voltage signal from sensor, regulated 5V supply to it, input from the brake light switch (12V when the brakes are on), and ground (labeled earth) connection
25. **SLIDE 25 EXPLAIN FREQUENTLY ASKED QUESTION**
26. **SLIDES 26-27 EXPLAIN** Servicing Regenerative Braking Systems
28. **SLIDE 28 EXPLAIN FIGURE 27–10** This graph compares the figures: at the far left, a throttle lift typically giving about 0.1 g deceleration; second from the left, a minimum regenerative braking of about 0.1 g; second from the right, a moderate regenerative braking is about 0.2 g; and on the far right, a hard emergency stop resulting in braking of (at least) 0.8 g, which uses both the regenerative braking system, as well as the base hydraulic brake system.
29. **SLIDE 29 EXPLAIN FIGURE 27–11** This Honda valve train photo shows the small spring used to absorb the motion of the rocker arm when the cam is switched to a lobe that has zero lift. This action causes the valves to remain closed, thereby reducing engine braking, which increases the amount of energy that can be captured by the regenerative braking system when the vehicle is slowing. The powertrain control module controls this valve action in response to inputs from the throttle position (TP) sensor and vehicle speed information
30. **SLIDE 30 EXPLAIN FIGURE 27–12** master cylinder from a Toyota Highlander hybrid electric vehicle.
31. **SLIDE 31 EXPLAIN FREQUENTLY ASKED QUESTION**

ICONS	Ch27 Regenerative Brakes
 	<p>32. SLIDE 32 EXPLAIN FIGURE 27-13 When working on the brakes on a Ford Escape or Mercury Mariner hybrid vehicle, disconnect black electrical connector on the ABS hydraulic control unit located on passenger side under the hood</p> <p>33. SLIDE 33 EXPLAIN CAUTION HANDS-ON TASK SHEET: COMPLETE TASK SHEET ON REGENERATIVE BRAKING SYSTEM IDENTIFICATION</p>
