## Chapter 3 Electrical Fundamentals

### Opening Your Class

| KEY ELEMENT   | EXAMPLES   |
|---|--|
| Introduce Content   | This course or class covers <b>Automotive Electrical &amp; Engine Performance</b> . It correlates material to task lists specified by ASE and NATEF.   |
| Motivate Learners   | Explain how the knowledge of how something works translates into the ability to use that knowledge to figure why the engine does not work correctly and how this saves diagnosis time, which translates into more money.   |
| State the learning objectives for the chapter or course you are about to cover and explain this is what they should be able to do as a result of attending this session or class. | Explain the chapter learning objectives to the students.<br><ol style="list-style-type: none"><li>1. Describe electricity as it is used in automobiles.</li><li>2. Explain the units of electrical measurement, and discuss the relationship among volts, amperes, and ohms.</li><li>3. Explain how magnetism is used in automotive applications.</li></ol> <b>This chapter will help you prepare for the ASE Electrical/Electronic Systems (A6) certification test content area "A" (General Electrical/Electronic System Diagnosis).</b> |
| Establish the Mood or Climate   | Provide a <i>WELCOME</i> , Avoid put downs and bad jokes.  |
| Complete Essentials   | Restrooms, breaks, registration, tests, etc.   |
| Clarify and Establish Knowledge Base  | Do a round robin of the class by going around the room and having each student give their backgrounds, years of experience, family, hobbies, career goals, or anything they want to share.   |

**ELECTRON FLOW**

**DEMONSTRATION: USE MAGNETS TO DEMONSTRATE HOW OPPOSITES FORCES ATTRACT AND LIKE FORCES REPEL. SHOW HOW MAGNETS ATTRACT AND REPEL EACH OTHER DEPENDING ON THE ORIENTATION OF THEIR POLES.**

- 6. **SLIDE 6 EXPLAIN Figure 3-5** unbalanced, positively charged atom (ion) will attract electrons from neighboring atoms.
- 7. **SLIDE 7 EXPLAIN Figure 3-6** hydrogen atom is simplest atom, with only one proton, one neutron, and one electron. More complex elements contain higher numbers of protons, neutrons, and electrons.
- 8. **SLIDE 8 EXPLAIN Figure 3-7** As number of electrons increases, they occupy increasing energy levels that are farther from the center of the atom.
- 9. **SLIDE 9 EXPLAIN Figure 3-8** Electrons in the outer orbit, or shell, can often be drawn away from the atom and become free electrons.

**DISCUSSION: DISCUSS ELECTRON ORBIT AROUND NUCLEUS & SHELLS ELECTRONS ORBIT WITHIN. HOW MANY SHELLS FORM AROUND NUCLEUS? DISCUSS VALENCE RING & HOW MOVEMENT OF ELECTRONS FROM RING CREATES CURRENT. DESCRIBE DIFFERENCE BETWEEN FREE & BOUND ELECTRONS.**

- 10. **SLIDE 10 EXPLAIN Figure 3-9** conductor is any element that has one to three electrons in its outer orbit.
- 11. **SLIDE 11 EXPLAIN Figure 3-10** Copper is an excellent conductor of electricity because it has just one electron in its outer orbit, making it easy to be knocked out of its orbit and flow to other nearby atoms. This causes electron flow, which is definition of electricity.
