Charging System Diagnosis And ServiceChapter 55

ACROSS

1 Battery voltage measurements can be read through __ measures the current of the alternator. 11 If there is a high _ in the alternator connections or in the wiring itself, the battery will not be properly charged. 13 _____is needed to determine if the belt is at the specified tension. 14 When _____, the slip rings on the rotor should be smooth and round, within 0.002 in. of being perfectly round.

DOWN

2	2 The	is the easiest way to	
	check the charging system voltage at the battery.		
3	B During the, if the	altemator smells like a	
	dead rat, the stator windings have been overheated by		
	trying to charge a discharged of	or defective battery.	
4	Before can b	egin, the stator must be	
	disconnected from the diodes.		
5	5is a procedure	used on older	
	noncomputerized vehicles for bypassing the voltage		
	regulator that could be used to determine if the		
	alternator is capable of produc	ing its designed output.	
6	When disassembling an altematic	ator, be sure to check	
	the because	the rear housing can be	
	installed in any one of four pos		
7	Start the engine and operate it at 2000 RPM is Step 2		
	when testing for	·············	
8	3 Most vehicles that use a compu	uter-controlled charging	
		system can be diagnosed using a	
9	Aisthree diodes	connected together.	
10) A uses plat	es of carbon to create	
	an electrical load.	an electrical load.	
12	During the remanufacturing process, old alternators		
	called are totally disass	embled and cleaned.
