

# Automotive Technology 6<sup>th</sup> Edition

## Chapter 61 AUTONOMOUS VEHICLES

### Opening Your Class

KEY ELEMENT	EXAMPLES
Introduce Content	This Automotive Technology 6th text provides complete coverage of automotive components, operation, design, and troubleshooting. It correlates material to task lists specified by ASE and ASEEducation (NATEF) and emphasizes a problem-solving approach. Chapter features include Tech Tips, Frequently Asked Questions, Case Studies, Videos, Animations, and ASEEducation (NATEF) Task Sheets.
Motivate Learners	Explain how the knowledge of how something works translates into the ability to use that knowledge to figure why the engine does not work correctly and how this saves diagnosis time, which translates into more money.
State the learning objectives for the chapter or course you are about to cover and explain this is what they should be able to do as a result of attending this session or class.	Explain learning objectives to students as listed below: <ol style="list-style-type: none"> <li>1. Outline the benefits and concerns regarding autonomous vehicles.</li> <li>2. Discuss the levels of autonomous vehicle automation and the computer power needed.</li> <li>3. Explain the different types of sensors used in autonomous vehicles.</li> <li>4. Discuss the importance having communications between vehicles and from vehicles to the infrastructure.</li> <li>5. Explain how cameras can be used in autonomous vehicles.</li> <li>6. Explain the purpose of the multi-domain controller and describe how it works.</li> </ol>
Establish the Mood or Climate	Provide a <b>WELCOME</b> , Avoid put downs and bad jokes.
Complete Essentials	Restrooms, breaks, registration, tests, etc.
Clarify and Establish Knowledge Base	Do a round robin of the class by going around the room and having each student give their backgrounds, years of experience, family, hobbies, career goals, or anything they want to share.

**NOTE: Lesson plan is based on 6<sup>th</sup> Edition Chapter Images found on Jim's web site @ [www.jameshalderman.com](http://www.jameshalderman.com)**

**DOWNLOAD Chapter 61 Chapter Images: From [http://www.jameshalderman.com/automotive\\_principles.html](http://www.jameshalderman.com/automotive_principles.html)**

**NOTE: You can use Chapter Images or possibly Power Point files:**

	<p>7. <b>SLIDE 7 EXPLAIN FIGURE 61–6</b> A charge coupled device (CCD) is an integrated circuit on a silicon surface forming light-sensitive elements called pixels. The light photons generate a charge that can be used by electronics and turned into a digital copy of image on the device.</p> <p>8. <b>SLIDE 8 EXPLAIN FIGURE 61–7</b> Lidar is a detection system that uses light from a laser to create a picture of the surrounding area.</p> <p>9. <b>SLIDE 9 EXPLAIN FIGURE 61–8</b> Ultrasound sensors are used at the front and rear of many vehicles and are used for detection of objects that are close to vehicle.</p> <p>10. <b>SLIDE 10 EXPLAIN FIGURE 61–9</b> A brake by-wire system using all electronic controls can eventually replace the hydraulic-based systems used on vehicles.</p> <p>11. <b>SLIDE 11 EXPLAIN FIGURE 61–10</b> advanced driver assist systems (ADRS) require that the sensors used be calibrated if there was a change in the alignment of if there was any damage done to the vehicle that could affect the cameras, or radar. (a) Most service information will include specific dimension for the areas where the calibrations needs to be performed. (b) Unique targets are needed to be used to calibrate the cameras and radar.</p>
