

# Brake Fluid And Lines

## Chapter 7

<http://jameshalderman.com>

### ACROSS

- 1 DOT 5 brake fluid is commonly called \_\_\_\_\_.
- 3 Another name for brake lines is \_\_\_\_\_.
- 4 \_\_\_\_\_ is designed to function in the hydraulic brake system under all operating conditions.
- 8 In many areas of the brake system, the steel brake line is covered with a wire coil wrap, this type of brake line is called \_\_\_\_\_.
- 11 \_\_\_\_\_ carry brake fluid from the master cylinder to the ABS hydraulic control unit.
- 12 Some French-built Citroen and British-designed Rolls Royce vehicles use \_\_\_\_\_ as part of their hydraulic control systems.
- 14 DOT 5 brake fluid does not absorb any water, and is therefore called \_\_\_\_\_.
- 15 \_\_\_\_\_ brake fluid is the type most often used.

### DOWN

- 2 \_\_\_\_\_ are used on each front wheel to allow for steering and suspension movement and at the rear to allow for rear suspension travel.
- 5 \_\_\_\_\_ brake fluid is a non-silicone-based polyglycol fluid and is clear to amber in color.
- 6 Another name for brake lines is \_\_\_\_\_.
- 7 \_\_\_\_\_ brake fluid is purple in color to distinguish it from DOT 3 or DOT 4 brake fluid.
- 9 Brake fluid is a polyalkylene-glycol-ether mixture called \_\_\_\_\_ for short.
- 10 Rubber products are called \_\_\_\_\_.
- 13 \_\_\_\_\_ brake fluid is formulated for use by all vehicles that are designed to use DOT 3 brake fluid.
