16 ENGINE LUBRICATION AND COOLING SYSTEMS

FIGURE 16.3 In an external-gear-type oil pump, the oil flows through the pump around the outside of each gear. This is an example of a positive displacement pump, wherein everything entering the pump must leave the pump.

16 ENGINE LUBRICATION AND COOLING SYSTEMS

FIGURE 16.4 A typical engine design uses both pressure and splash lubrication. Oil travels under pressure through the galleries (passages) to reach the top of the engine. Other parts are lubricated as the oil flows back down into the oil pan or is splashed onto parts.
