

# Dash Warning Lights and Driver Information Systems

## Chapter 24

<http://jameshaldeman.com>

### ACROSS

- 2 A \_\_\_\_\_ is used to display the area at the rear of the vehicle in a screen display on the dash when the gear selector is placed in reverse.
- 5 Electronic \_\_\_\_\_ use the voltage changes from variable-resistance sensors, such as that of the fuel gauge, to determine fuel level.
- 6 The \_\_\_\_\_ uses 24 satellites in orbit around the earth to provide signals for navigation devices.
- 7 If the \_\_\_\_\_ remains on after the self-test, then the airbag controller has detected a fault.
- 11 The \_\_\_\_\_ is a supplemental display that projects the vehicle speed and sometimes other data, such as turn signal information, onto the windshield.
- 12 Another name for the check engine light is the \_\_\_\_\_.
- 13 The \_\_\_\_\_ uses cameras to detect if the vehicle is crossing over lane marking lines on the pavement.
- 14 The \_\_\_\_\_ warning lamp will light and sound an alarm to notify the driver if the driver's side or passenger's side safety belt is not fastened.
- 15 This warning lamp should come on if the coolant temperature reaches 248°F to 258°F (120°C to 126°C).

### DOWN

- 1 The \_\_\_\_\_ lamp comes on if the vehicle requires service.
- 3 This warning lamp should light in the event of low oil pressure, about 3 to 7 psi.
- 4 Some odometers are mechanical and are operated by an electric \_\_\_\_\_.
- 8 When a vehicle is equipped with a digital dash is started, all segments of the electronic display are turned on at full brilliance for 1 or 2 seconds is called the \_\_\_\_\_.
- 9 The backup sensor system used in GM vehicles is called \_\_\_\_\_.
- 10 Speed sensors are commonly called \_\_\_\_\_.
