

## Wheel Bearing Service

Meets NATEF Task: (A5-F-2) Remove, clean, inspect, repack, and install wheel bearings and replace seals; install hub and adjust bearings. (P-1)

Name	Date	Time on Task				_
Make/Model/Year	VIN	_ Evaluation:	4	3	2	1

- **1.** Remove the wheel cover and the hub dust cap (grease cap).
  - **2**. Remove and discard the cotter key.
    - **3.** Remove the spindle nut, washer and outer bearing.
    - **4.** Remove inner and outer bearing and grease seal.
    - **5.** Thoroughly clean the bearing in solvent and denatured alcohol or brake cleaner and blow it dry with compressed air.
    - **6.** Closely inspect the bearing for wear or damage.
  - 7. Show the instructor the cleaned bearing.

Instructor's OK

- **8.** Repack the bearing with the correct type of wheel bearing grease.
  - **9.** Install a new grease seal using a seal installing tool.
- **10.** Correctly adjust the bearing preload:
  - Install the spindle nut and while rotating the tire assembly, tighten (snug only, 12 to 30 lb.-ft.) with a wrench to "seat" the bearing correctly in the race.
  - \_\_\_\_\_ While still rotating the tire assembly, loosen the nut approximately 1/2 turn and then *hand tighten only*.
  - Install a new cotter key (the common size is 1/8" diameter and 1.5 inches long).
  - Bend the ends of the cotter key up and around the nut to prevent interference with the dust cap.
  - **11.** Install the hub dust cap (grease cap) and wheel cover.
