

**Wheels:** Jay writes by e-mail, "I cannot find Mobil 1 (5W-20 ) and I need your expert advice. My Honda is due for an oil change, and while I do have four quarts on hand, I need 4.4 quarts total.

Should I add 0.4 quarts of another synthetic brand to the existing Mobil 1 I have, or would it be better to switch this one time to 4.4 quarts of a completely different synthetic? If so, is one more compatible to Mobil 1 than another, or wouldn't it make much difference? I've used only Mobil 1 for the four years since purchasing the vehicle.

Again, it's wonderful to have your expertise available to readers of the Dayton Daily News. Thank you in advance."

**Halderman:** I have not had any problem finding Mobil 1. If you cannot locate a store that handles this grade, then you could use any other oil of the same or similar viscosity. This is okay because all oil is by law "miscible" and can be mixed without any concerns.

I hope this helps.
