

Name \_\_\_\_\_

**SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.**

1) What are ampere, volt, and ohm?

---

---

---

2) What is electricity?

---

---

---

3) What is the relationship between the length of a wire and its resistance?

---

---

---

4) What are the three examples of conductors and three materials that are insulators?

---

---

---

5) What are five sources of electricity?

---

---

---

## Answer Key

Testname: AEE6\_SHORT4

- 1) An ampere is the unit of the amount of current flow; a volt is a unit of electrical pressure and an ohm is a unit of electrical resistance.  
Page Ref: 57-58
- 2) Electricity is the movement of electrons from one atom to another.  
Page Ref: 53
- 3) If the conductor length is doubled, its resistance doubles. If the conductor diameter is increased, its resistance is reduced. As the temperature increases, the resistance of the conductor also increases.  
Page Ref: 60
- 4) Conductors include steel, iron, copper, aluminum, mercury, brass, and all other metals.  
Page Ref: 55-56
- 5) Sources of electricity include friction, heat, light, pressure, and chemistry.  
Page Ref: 59
