

Name _____

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

- 1) What is the difference between volatile and nonvolatile RAM?

- 2) How does using pulse-width modulation control devices?

- 3) What are four input sensors?

- 4) What part of the vehicle computer is considered to be the brain?

- 5) What are four output devices?

Answer Key

Testname: AEEP8_SHORT13

- 1) Volatile RAM means that the data is erased whenever the power is removed from the computer, whereas non-volatile RAM means that the data is retained when power is removed.

- 2) Pulse-width modulation (PWM) is a method of controlling an output using a digital signal. Instead of just turning devices on or off, the computer can control the amount of on-time.
[Page Ref: 199](#)
- 3) Input sensors include: engine speed (RPM), MAP, MAF, ECT, O2S, TP, and vehicle speed.
[Page Ref: 197](#)
- 4) The CPU is the “brain” of the computer.
[Page Ref: 195](#)
- 5) Output devices include: fuel injection, ignition timing, transmission shifting, idle speed control, and evaporative emission control solenoids.
