

Name _____

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

1) How do you aim headlights on a vehicle equipped with aerodynamic-style headlights?

2) How do you diagnose a turn signal operating problem?

3) Why should the exact same trade number of bulb should be used as a replacement?

4) Why is it important to avoid touching a halogen bulb with your fingers?

Answer Key

Testname: AAEE_SHORT16

- 1) An optical headlight aimer is required to correctly aim aerodynamic-style headlights.
Page Ref: 216; 223-224
- 2) If only the turn signals work correctly on one side, the most likely cause is a defective bulb, whereas if both sides fail to operate, the problem is most likely a defective flasher or flasher relay.
Page Ref: 210
- 3) The same trade number bulb should be used as a replacement because this assures that the correct voltage and wattage bulb is used.
Page Ref: 204
- 4) A halogen bulb contains a high-pressure gas, and oils from the hands can affect the expansion of the glass, which can shorten the life of the bulb.
