

CAN And Network Communications

Chapter 49

<http://jameshalderman.com>

ACROSS

- 1 A ___ is a term used to describe a communications network.
- 3 The system of intercommunication of computers or processors is referred to as a _____.
- 7 Most high-speed BUS systems use resistors at each end, called _____.
- 9 ___ is a serial data communications protocol used by GM and others.
- 10 _____ 81, 82, and 2000 serial data are also used for some module-to-module communication on GM vehicles.
- 12 The _____ is data transmitted over one wire by a series of rapidly changing voltage signals pulsed from low to high or from high to low.
- 13 A _____ is a set of rules or a standard used between computers or electronic control modules.
- 15 The process of _____ involves the sending of multiple signals of information at the same time over a signal wire and then separating the signals at the receiving end.
- 17 In a star link network, a serial data line attaches to each module and then each is connected to a central point, this central point is called a _____.

DOWN

- 2 Low-speed GMLAN is also known as _____.
- 4 In the differential form of module communication, a difference in voltage is applied to two wires, called a _____.
- 5 All modules on the Class 2 BUS circuit have at least one other module responsible for reporting _____.
- 6 GM calls their version of CAN _____.
- 8 Each module, also called a _____, must communicate to other modules.
- 11 The Chrysler ___ is a one-wire communication protocol that connects at the OBD-II DLC at terminal 2.
- 12 ___ uses J-1850 protocol and is active with the key on.
- 14 High-speed BUS communication systems now use a _____.
- 16 Newer Fords use the CAN for scan tool diagnosis, but still retain SCP and ___ for some modules.
