Name_____

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

 Technician A says the gears in a planetary gearset are in constant mesh. Technician B says a planetary gearset has a ring gear and pinion gears. Which technician is correct? A) Technician A only B) Technician B only C) Both technicians D) Neither technician 	1)
 2) Technician A says that one planetary gear set can provide gear reduction, overdrive, and reverse. Technician B says that most transmissions today use compound (multiple) planetary gear sets. Which technician is correct? A) Technician A only B) Technician B only C) Both technicians D) Neither technician 	2)
 3) Automatic transaxles include a in addition to the planetary gear sets. A) transversal B) dry clutch C) differential assembly D) spur gear 	3)
 4) During which of these conditions is the torque converter clutch engaged? A) At speeds over 25 MPH B) During acceleration from a stop C) During acceleration at highway speeds D) None of these 	4)
 5) Using a torque converter smaller than stock size could result in A) Slower than normal acceleration B) Faster than normal acceleration C) Reduced fuel economy D) Both B and C 	5)
 6) A CVT changes gear ratios by changing the diameter of the A) torque converter B) planetary gear set ring gear C) drive and driven pulleys D) output gear 	6)
 7) The torque converter clutch increases efficiency by A) allowing quicker starts in first gear B) eliminating converter slippage C) disconnecting the torque converter from the engine at a stop D) none of these 	7)

8) Technician A says automatic transmissions can shift gears without requiring an interruption of powerflow. Technician B says automatic transmissions use synchronizers instead of planetary gearsets. Which technician is correct?

8)

9)

10) _____

A) Technician A only

B) Technician B only

C) Both technicians

D) Neither technician

- 9) Two technicians are discussing automatic transmissions/transaxles. Technician A says that it is normal for a vehicle to move slightly when the gear selector is in the "drive" position with the brakes released. Technician B says that the stator may be defective if the vehicle moves while in gear when the engine is at idle speed. Which technician is correct?
 - A) Technician A only

B) Technician B only

C) Both technicians

D) Neither technician

10) What is the purpose and function of a lock-up part of the torque converter?

A) Improves fuel economy by eliminating slippage

- B) Increases vehicle performance by allowing more torque multiplication
- C) Allows the transmission/transaxle to shift faster
- D) Increases fluid pressure in the transmission/transaxle
