

Name _____

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

1) What are three common types of automotive antifriction bearings?

2) What is the meaning of the different colors of grease?

3) What is the adjustment procedure for a typical tapered roller wheel bearing?

4) What are four symptoms of a defective wheel bearing?

5) How is the rear axle removed from a C-lock-type axle?

Answer Key

Testname: SHORT 102

- 1) Three types of automotive antifriction bearings include: ball bearings, roller bearings, and tapered roller bearings.
Page Ref: 1167
- 2) Grease is colored for identification, marketing, and for consistency of color reasons.
Page Ref: 1169
- 3) The adjustment procedure for a typical tapered roller wheel bearing includes: tightening the spindle nut while rotating the wheel, then loosening the nut (while still rotating the wheel), tighten the spindle nut by hand. Loosen the nut slightly until the cotter pin can be inserted. Install the cotter pin.
