

Name \_\_\_\_\_

**MATCHING. Choose the item in column 2 that best matches each item in column 1.**

- |                                      |                                      |          |
|--------------------------------------|--------------------------------------|----------|
| 1) Checks for high resistance        | A) Disconnect negative battery cable | 1) _____ |
| 2) Symptom of high resistance        | B) Voltage drop test                 | 2) _____ |
| 3) Starter control circuit component | C) Armature                          | 3) _____ |
| 4) Amperage draw too high            | D) 150 to 160 amps                   | 4) _____ |
| 5) Starter removal first step        | E) Relay                             | 5) _____ |
| 6) Starter whines                    | F) Solenoid clicking                 | 6) _____ |
| 7) Amperage draw too low             | G) 60 to 100 amps                    | 7) _____ |
| 8) Bench test amperage               | H) Electrical problem                | 8) _____ |
|                                      | I) Mechanical problem                |          |
|                                      | J) Hoist the vehicle                 |          |
|                                      | K) Bad starter drive                 |          |
