

Airbag and Pretensioner Circuits

Chapter 56

ACROSS

- 4 As the steering wheel is rotated, a coil, usually called a _____, prevents the lack of continuity between the sensors and the inflator assembly that might result from a horn-ring type of sliding conductor.
- 6 Another name for the deceleration sensors are the _____ sensors.
- 7 Many vehicles are equipped with _____-_____ airbags that actually contain two separate inflators, one for less severe crashes and one for higher speed collisions.
- 11 Another name for the occupant detection system is the _____ presence system.
- 12 As part of the airbag controller on many vehicles, the _____ recorder is used to record parameters just before and slightly after an airbag deployment.
- 13 One name for an airbag system is the supplemental _____ system.
- 14 The airbag systems are sometimes called supplemental _____.
- 15 The _____ is used to provide electrical power, and a forward or discriminating sensor is used to provide the ground connection.
- 17 Always follow the _____' procedure for disabling the airbag system prior to any work performed on the system.

DOWN

- 1 The passenger side airbag will be disabled or deployed with reduced force when certain criteria are met on an _____ detection system.
- 2 Some vehicles are equipped with _____ usually on the driver's side.
- 3 All airbag electrical connectors and conduit are _____ and all electrical terminals are gold plated to protect against corrosion.
- 5 _____ airbags use a variety of sensors to determine if they need to be deployed.
- 8 A _____ is an explosive device that is part of the seat belt retractor assembly and tightens the seat belt as the airbag is being deployed.
- 9 Some vehicles use electronic _____ sensors built into the inflator module.
- 10 The airbag system may be known as supplemental _____ restraints.
- 14 _____ passive restraints are designed to cushion the driver during a frontal collision.
- 16 The arming sensor provides the electrical power to the airbag heating unit, called a _____, inside the inflator module.
